

Catamaran Centreboards

Technical Datasheet

Especially manufactured for exclusive catamaran, these centreboards are manufactured from carbon and glass fibres and epoxy resin.

Lighter and stiffer than the common glass-polyester centreboards due to their carbon structure, these centreboards are equipped with channels to let the water flow inside their body such that they are not floating.

Visible at man's eye height on exclusive catamarans, the quality of finishing of these products and the respect of the profile geometry have to be perfect.

Main Characteristics:

Length :	4 400 mm
Chord :	585 mm
Weight :	54 kg
Material :	carbon-glass-epoxy
